| Title | Use of ADC |
| Duration | 3 CPD hours – ½ day workshop |
| Location | Watford training rooms or at your office |
| Price | £220 + VAT – price on application for offsite training |

Price includes refreshments and course materials

The purpose of this course

This course will help you to get the most out of ADC, whether you design buildings or piled foundations.

Who is this course for?

Structural engineers who want to use ADC to design a range of concrete elements, from circular piles to rectangular columns and from multi-span beams to solid or ribbed slabs.

You will learn how to

- Design beams, slabs and columns
- Find the optimum reinforcement for multiple load cases
- Control the reinforcement options to fine tune your designs

Relevant Products

- ADC AdCol
- ADC AdBeam
