

Geotechnical FEA reimaged

Oasys Gofer brings the advantages of **cloud computing** to geotechnical modelling.

Try Gofer today

Key Features:

- Easy to use, 2D geotechnical FEA.
- Makes everyday modelling effortless.
- Updated regularly and work is saved instantly.
- Cloud based - simply log in and go!
- A new era for Oasys geotechnical software using the latest design and development techniques.
- User API, with a dictionary of endpoints for interaction from your own code.

Core Capabilities:

Linear elastic and
Mohr Coulomb
soil materials

2D Plane
strain analysis

Structures,
structural
connections

C-phi
analysis

Steady state
seepage

Consolidation

What is Gofer?

Oasys Gofer is our geotechnical **finite element analysis (FEA)** software for everyday geotechnical modelling. Use Gofer to model the behaviour of the ground as things are built on, in and through it.

Gofer provides everything needed for common geotechnical problems such as retaining walls, foundations, excavations, and slopes.

Why Gofer?

Built in close consultation with Arup geotechnical engineers, Gofer enables you to build and run everyday models with ease due to its **intuitive** design. Behind the scenes Gofer leverages **cloud computing** running several models simultaneously. Beyond this, Gofer's API allows you to connect your own logic to cloud computing.

Combining modern software design and development techniques, powerful cloud computing, and geotechnical methods, Gofer is just getting started.

Join us on the journey to cloud.
