

Geotechnical graphing for the digital age

Produced in partnership with Seequent

SEEQUENT

Key features:

- Designed for integration with Seequent's OpenGround.
- Choose from template graphs, or create your own from scratch.
- Create and export report-ready graphs wherever you have an internet connection.
- Refresh graph data to see updated results instantly.
- Comprehensive how-to guides, video tutorials and technical support.

Core capabilities:

OpenGround All-clo integration simply

Modernised workflows

Consistent graph

reporting

Batch and individual exports

Support and resources

Dynamic graphing begins with a click

Smart, powerful and fast, Oasys Giraphe is the latest cloud-based solution from Oasys. Giraphe takes the hard work out of graphing, communicating seamlessly with OpenGround data and automatically saving your creations, ready to export when you are.

Why Giraphe?

Giraphe works in-sync with Seequent's OpenGround geotechnical information management platform.

Whether you're working with in situ or lab results; geo-environmental or monitoring data, Giraphe's graph library allows you to choose from a range of ready-made graph templates or build your own graph with our flexible display options. Update your data with live and on-demand connections to OpenGround without having to rebuild your graph.

Giraphe is part of the modernisation of geotechnical workflows; saving time over working in data tables and reducing inconsistencies with graphing reports across your organisation.
